CHIP SHOP MAN SAYS: POP IN FOR A BYTE

Graham Barrow... fish and micro chips

CHIP shop owner Graham Barrow will serve you cod and chips for 80p — plus a game for your home computer.

Graham, 29, has set up a display of cassettes for the Spectrum, VIC-20 and ZX81 opposite the frying range of his shop on the busy Upper Richmond Road, Richmond, Surrey.

He became interested in computers while working for Datastream — a City financial services company. He left to take over the shop, Pisces Fish Bar, eight years ago.

Graham said: "I thought no more about it until a year ago when I bought a VIC-20 — that's when they cost £200 — because I wanted to learn about computers. I bought myself a book and taught myself to program and I wrote a program to help me with the accounts.

"I'm one of those people who does not like to have incomplete knowledge.

"I found there was nowhere to go in this area for a good selection of software — just the chain stores who only stock a small range. And, in common with most people, I don't like buying through the post. There's a time delay and you don't know what you're getting.

"I got fed up with waiting for someone to open a software

WINDOW ON ANOTHER WORLD

NEW RELEASES FOR DRAGON 32 FROM

Salamander Software

FRANKLIN'S TOMB

£9.95

Franklin's Tomb is an adventure for one player. Can you, as Dan Diamond, solve the riddle of the crypt, or will you fall prey to its mystery as so many other before you. Franklin's Tomb comes complete with a 20 page fully illustrated case file.

EVEREST

£7.95

Nestled on the border between Tibet and Nepal, the highest mountain in the world. Everest, Goddess Mother of the world, towers five and a half miles above sea level. In 1953, Sir Edmund Hilary and Sherpa Tenzing Norgay were the first men to conquer the unconquerable. Now you have the chance to scale the summit of Everest, Lhotse or Nuptse. Will your attempt end in tragedy, or will your name live forever in the annals of mountaineering history.

GRINDRUNNER

£7.95

By the year 2190 the Earth is a barren and desolate wasteland. With all natural resources used up, the human race's last hopes rest with a huge orbiting solar power station known as GRID. Now the GRID has been invaded by a race of evil droids from Frogfax V, intent on the total subjugation of Earth. To combat these droids, an incredibly powerful and manoeuvrable ship, the Gridrunner, was developed. Your mission stop the droids and save the Earth! Gridrunner is an arcade game requiring 1 joystick.

DRAGON 32 and TANDY 32K (please specify):

Dragon Trek £9.95. Wizard War £7.95.
Golf £7.95. Grand Prix £7.95. Vulcan
Noughts & Crosses £7.95. Games Comp
D1 £7.95. Salamander Graphics System
£9.95. Super Skill Hangman £7.95. Star
Jammer £7.95. Nightlight £7.95.

BBC MODEL B

Dragon Rider £7.95. Tanks! £7.95. Games
Comp B1 £6.95. Games Comp B3 £6.95.
EDG Graphics (tape) £24.95. EDG Graphics
(disc) £29.95.
ORIC 1: Oric Trek £9.95. Games Comp 01
£7.95.

business and I thought: 'If no-one else is going to do it, then I will.'

"I decided to sell it here because I wasn't confident enough to open another shop — it would mean money, staff and rent — and I've got a lot of space in here."

Sheensoft, as the computer section is called, officially opens today with a range of tapes from major software houses.

One of Graham's suppliers is Liverpool-based Bug Byte whose joint managing director Tony Baden said: "When I heard about it my pint nearly went down the wrong way."

"But, thinking about it, it seems logical — a lot of kids go in there and a lot of chip shops have arcade games."

"I see software being sold anywhere that music cassettes are sold at present. The market's big enough for everyone to have a share."

Graham lives above the shop with his wife Wendy, 28, and two daughters, Emma, four, and 12-month-old Charlotte.

And what does W.H. Smith — with a store just a few miles away — think of the competition? A spokesman said: "I would be frightfully worried about greasy fingers on the keyboards...."

TV with a difference

Home computer users who tune into telesoftware broadcasts may be interested in Philips new 3890 TV set — because it incorporates a printer. The printer can be used to copy out listings of broadcast programs, as well as copying any teletext page.

The printer is housed in a spring-loaded drawer to the right of the screen, and uses aluminised paper. Three rolls of paper are supplied with the set, and each roll will hold 175 screen pages.

Over the moon

Orion Software is over the moon about its first program for the 16K ZX81. Called Moonlander, it's based on the NASA Apollo series in 1969 when Neil Armstrong became the first man on the moon.

According to Orion, Moonlander is a mixture of luck and skill. Random factors like orbit height and amount of fuel used mean that no two missions are the same. But to land successfully demands skill and practice — fortunately there's a practice mode.

Orion plans to follow Moonlander up with a graphics aid for the ZX81 and Spectrum, to be released within about six weeks. Other ZX software will be released soon.

Orion, Pippbrook Mill, London Road, Dorking, Surrey RH4 1JE

From Rubik to RAM

Patrick Bossert, who wrote You Can Do The Cube when he was 13, hopes to repeat his success with a collection of home computing games.

Called Micro Games, the book will cater for both models of BBC micro, the Spectrum, ZX81 and Research Machines 380Z and 480Z.

Philippa Dickinson, who co-authored Micro Games with Patrick, said: "There are all sorts in there — some speed-reaction types and some working-things-out games."

Patrick, who has now reached the ripe old age of 15, is currently doing O-levels. In his spare time he enjoys programming his BBC Model B, which was bought with some of the proceeds from You Can Do The Cube.

Penguin is also hoping to encourage more young programmers by organising a National Micro Competition which opens in September.

Penguin Books, 536 King's Road, London SW10 0UH

A NEW SERIES FOR FIRST TIME USERS

These titles are the latest in a new series of books which introduce newcomers to the most widely used micros in the marketplace.

The "Learning to use" series of books assume absolutely no knowledge about computers and the reader is shown even the most fundamental operations such as "switching on" and "loading a program". The books lead the reader through simple programming and then onto graphics, with several programs which show how to achieve pictures and even animation.

The user-friendly approach is consistent throughout the text - not only are program listings clearly shown, but in many cases, a photograph is included to show what the program looks like when actually loaded and run!

The books contain a number of specially written programs which show the full potential of these machines.

Nothing to ad?

Complaints by members of the public have got more micro companies into trouble with the Advertising Standards Authority.

This time Dragon Data is in the doghouse because of an advert in national papers.

They said that "the power of a computer is measured in units of RAM — standing for Random Access Memory". But after seeking expert advice, the ASA agreed with the complainant that

Computers shares it out

Computers, who brought you the Lynx, is selling off shares to raise a further £900,000 for product development.

The money will go towards putting the final touches to the 128K Lynx, due out this autumn with a £445 price tag; to disc drives, scheduled for August, and to more Lynx software. It will also enable Computers to make more of the standard Lynxes.

Should you have £850 to gamble on the stock market, you might be interested to know that holders of 5,000 or more shares, at 17p each, are entitled to a 10 per cent discount on Computer products.

Computers, 33A Bridge Street, Cambridge CA3 4AB

amount of RAM was a measure of memory size, rather than an indication of the computer's power.

Two software companies were also criticised for advertising programs that they couldn't deliver in time. D. J. Moody Software, of Bingham, Notts, failed to deliver the goods, despite an ad that stated: "Orders despatched within 48 hours".

And a man from Winscombe complained that he had ordered a game called Mad Monk from Merlin Micro Systems, of Cleveland, in March 1982, and had not yet received it despite claims in a recent Merlin ad that it was "ready at last".

Advertising Standards Authority, Brook House, Torrington Place, London WC1E 7HN

Micros? A piece of cake

If you're still deciding whether to take the plunge and buy a micro, there's a new paperback due out at the end of this month which could make your decision easier.

First Byte is, so its publishers say, "written for the ordinary person who want to know what possible use a computer could be to him" — or her, presumably.

It looks at how computers developed, explains the principles of programming, and introduces the micros you're most likely to meet, along with their accessories.

It explains the uses of a home micro, from games to word processing, and scans developments expected in the near future.

First Byte is written by Mike Scott Rohan, author of science fiction novel Run to the Stars.

Mike's enthusiasm for computers evidently extends to his meals. First Byte's book jacket

features a computer made of cake, baked and iced by Mike's wife. First Byte costs £3.95.

EP Publishing, East Ardsley, Wakefield, West Yorks WF3 2JN

Curses... it talks back

Don't curse your computer when it won't do what you want — it just might start talking back.

In fact Cheetah, which has just brought out the Sweet Talker plug-in unit for Spectrum and ZX81s, uses a program to check its modules which tells listeners to "P... off."

Joint managing director Melvin Beresford said: "That show you how wide the range is...the vocabulary really is unlimited."

His company makes the same claim about the £34.95 Sweet Talker as it makes about its range of RAM packs: They are cheaper than the competition.

Mr Beresford said the speech module was £5 less expensive than the two main competing products and that it did not involve opening the computer.

He expects it to be used in programming by saying things like "warning — missile attack" in space games and reckons it could even be tied in with the front door bell.

Sweet Talker, which comes with a booklet and demonstration tape, is programmed by typing in numbers for each part of a word or phrase which are then "spoken" through a 2 1/4 in speaker.

There is no volume control and there is no facility to connect it to a larger speaker. A port at the back allows other peripherals to be attached.

Cheetah's next new product will be a Spectrum light pen.

More stores, more micros from Tandy

Tandy, the world's giant electronic retailing chain, is growing even bigger here with 25 new stores and 24 new dealers due to open this year.

And the company has just launched four new computers in the UK. They are:

- The Model 100, a rival for Epson's HX20, which costs £499 and is the size of A4 paper. It comes with a 40 character by eight line liquid crystal display, 8K of RAM, 32K of ROM, including a word processor, a diary as well as Microsoft BASIC, 30-hour batteries and ports for RS-232 and Centronics printers and 1500 baud cassette, compatible with the new Model 4.

- The Model 12, costing £2,299, which has 80K of RAM — expandable to 726K — screen and an 8in floppy disc.

- The Model 4, priced at £1,400 with 64K of RAM, expandable to 128K.

- The PC4, £49, an addition to Tandy's range of small hand-held micros.

School plans autumn computer fair

A Welwyn Garden City school has hit on an enterprising way of raising funds — by holding a computer fair.

The Sir Frederic Osborn School's fair will take place on Sunday October 2, from 10.30 am to 4.30 pm.

Robert Brown, head of the school's technology and design department, who is organising the fair, said, "Ten percent of the proceeds will go to the school fund, ten percent to charity, and the rest will go towards improving the school's computer facilities.

"We've already got three Research Machines 380Zs — two we bought and one our sixth-formers won in a competition — and two Spectrums. But we'd like to buy two BBC Micros as well."

There will be a maximum of 33 stalls at the fair, and stands are £8 each.

The Sir Frederic Osborn School, Hens Lane, Welwyn Garden City, Herts AL7 2AF

Managing director John Sayers said this year the company would grow to 250 Tandy-owned stores — most of the new ones would be computer centres — and 117 authorised dealers.

Asked about the company's low public profile, Mr Sayers said: "We may not have marketed as aggressively as some others and maybe we are not as prolific as, say, Dragon or Sinclair, but we are very happy and we sold out of our Colour Computer at Christmas.

"With the Model 100 we have something which is exciting and this puts us at the forefront." *Tandy Corporation, Tameway Tower, Bridge Street, Walsall, West Midlands WS1 1LA*

Forbidden adventure

Kenema has added four new programs to its Oric software range. But before you venture into Hell's Temple, the new adventure game, you'll have to answer one question: have you got an adult with you?

Not that there's anything too hair-raising inside the Temple. According to Kenema's Brian Green, the question is really a cunning psychological ploy.

"We want to stimulate youngsters into getting involved in adventure games", he said. "If we say that they can only use the program accompanied by an adult, the first thing they'll want to do is look into the program and see what's going on.

"We're hoping to get away from zapping-type games and move towards the sort of game that makes your brain hurt."

Having said that, though, Mr Green admitted that there was a Space Invaders game, Oric Invasion, in the new collection.

The other new programs are File Star, a database program, and Extension Monitor, which allows the Oric to be programmed and debugged in machine code.

The programs will be priced around £12 — apart from Oric Invasion, which will cost around £5. They will be available in about two weeks.

Kenema, 1 Marlborough Drive, Worle, Avon BS22 0DQ

Let the buyer beware

Marketing in the microcomputer industry is a real trouble spot.

Not so many years ago, before the micro boom began, computers were only available through specialist dealers. Now mass advertising and the numerous magazines on the subject means that micros are a consumer product, on sale in high street chain stores.

But can these stores really offer the kind of support a micro buyer needs? Their staff aren't specialists; they may well have no particular interest in computers and no incentive to keep abreast of developments in the industry.

To the question, "Will it do the accounts for my corner shop?", it's very doubtful that an adequate answer or suitable demonstration could be given by a busy sales assistant in a busy open plan store, where queues of other customers are waiting.

Only recently the press stated that the Apple computer was no longer being supplied by a number of retail outlets, because these outlets couldn't give it adequate support. For whatever reason, Tandy's range of computers is now mainly stocked by its own chain of stores where, it is hoped, the staff can be given proper training.

But retail outlets aren't the worst of it. At least there you have somewhere to take a product back to should problems arise. With mail order, returning goods can be quite a problem — assuming the goods arrive in the first place.

A year ago I answered an ad in a well-known computer journal for a certain piece of software. After phoning the company and being assured that the product was available, I sent off the payment.

When the product hadn't turned up after a week, I phoned the company again and was told the goods had been sent. A further week passed, and more contact was made about the product's non-arrival.

To cut a long story short, an investigation agency discovered that the premises were vacated soon after being rented, and a lot of people had been trying to trace the company's whereabouts. Quick action was suggested.

Two courses of action were open to me (other than putting it down to experience): try and trace the owners and serve a summons though the small claims section of the county court; or rely on the Mail Order Protection Scheme that many magazines belong to.

My first act was to inform every magazine I subscribed to, and the response from some was an eye-opener.

Some were unwilling to remove ads that were due to be published because they would leave a blank page. The suggestion that another advertiser was given a free, or cut-price, ad to replace it was rejected.

The ads ran for a further two months and, as I understand it, none of them were paid for.

All industries have their share of problems, particularly in the early stages. But the microcomputer industry is growing very fast and the product is very complex. Most of the buyers are either young or have no knowledge of the products or both. A lot more guidance for the buyer is needed — both from retailers and from the press.

Beeb-Ex expands the BBC's potential

Pick a card — for the BBC

BBC owners with big ambitions for their machines can use Control Universal's Beeb-Ex interface to connect the micro to a range of Eurocards.

Eurocards are standard-sized printed circuit boards which can be used as the elements of a tailor-made computer system.

Used with the BBC Micro, they can provide up to 1 megabyte of extra memory in the form of switched "pages", and allow the micro to be connected to a wide selection of industrial quality input and output devices.

Beeb-Ex connects by a ribbon connector to the BBC's 1 MHz bus port, and comes in two formats. The first, costing £49, is a stand-alone unit which allows four other Eurocards to be slotted in.

The second costs £41, and will slot into a standard rack-mounted Eurocard system.

Control Universal, Unit 2, Anderson's Court, Newnham Road, Cambridge CB2 9EZ

You could be on our pages

We welcome programs articles and tips from our readers.

PROGRAMS should, if possible, be computer printed to a width of 48 characters (use a new ribbon) and/or sent on cassette. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.

ARTICLES on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers make better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.

TIPS are short articles, and brief programming routines which we can put together with others. Your hints can aid other computer users.

Competitive rates are paid.

Keep a copy of your submissions and include an SAE if you want them returned. Label everything clearly and give a daytime and home phone number if you can.

Paul Liptrot, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE

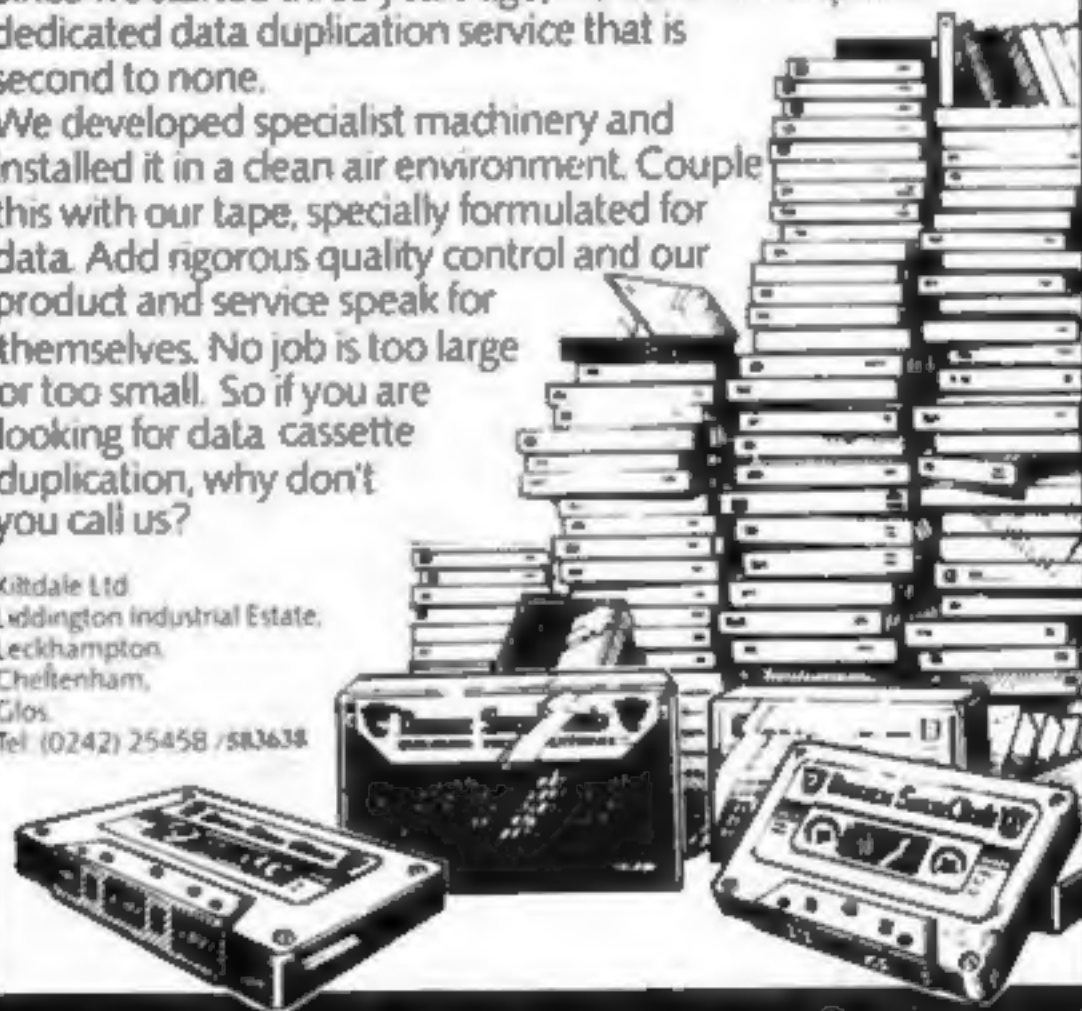

Kiltdale

At Kiltdale we don't treat computer program duplication as a side line. We are the specialists.

Since we started three years ago, we have developed a dedicated data duplication service that is second to none.

We developed specialist machinery and installed it in a clean air environment. Couple this with our tape, specially formulated for data. Add rigorous quality control and our product and service speak for themselves. No job is too large or too small. So if you are looking for data cassette duplication, why don't you call us?

You're in the driver's seat, and mistakes could be fatal

Grand Prix takes you to Le Mans and puts you in the driver's seat of a Formula One racing car, thanks to your 32K BBC micro.

Not only must you avoid the other cars on the track, but you must avoid stalling or over-revving the engine.

There is a choice of skill levels and you can even design your own circuit easily using DATA statements.

At the lowest skill level any mistakes are treated leniently. At the more experienced level all errors are fatal . . . so beware.

These are your control keys:

- cursor left steer left
- cursor right steer right
- A accelerator
- B brake
- U change gear up
- D change gear down

Hints on conversion

BBC BASIC is easy to follow and can be converted to other machines with similar graphic capabilities. Here are a few tips:

PROCedures should be replaced by GOSUBs; COLOUR defines the text colour — at least four are needed — and is used with VDU19; VDU23 sets an ASCII character, on an eight by eight grid, to define special shapes; SOUND and ENVELOPE cannot be easily converted, so I suggest you use your machine's own commands to create sounds; REPEAT...UNTIL loops should be changed to infinite FOR...NEXT loops with an escape condition; IF...ELSE should be changed to two separate IFs.

LOCAL allows two variables to have the same name, one inside a PROCEDURE and one outside; INKEY with a negative parameter checks to see if a specific key is pressed at that moment.

VDU28 allows a small square on the screen to be handled separately from the rest. Its colour can be changed or text can be scrolled quite independently of the rest. POINT returns the colour of the screen at position (X, Y); *FX 15,1 clears the keyboard buffer; VDU 14 and 15 allow the screen to stop and start scrolling.

Now's your chance to take part in a Grand Prix at your choice of tracks. Jeff Pratt has your Formula One racing car ready for you

Variables

Nearly all the variables have meaningful names whose use is clear, like SPEED%, MILES_PER_LAP. Others:

- W1%, W2%, W3 etc general work
- fields used to hold temporary value before a "proper" variable is assigned
- L_TRK_ST%, R_TRK_ST% hold size of grass verges on last mile to be shown
- L_CARS, R_CARS, RF_CARS etc define parts of car, combined with direction of travel. L_CARS draws car to left of current position, RF_CARS draws car in front and to right
- LSCTR% used in conjunction with VDU23 to hold next available ASCII code to be redefined

Highest scores are held for each of the available circuits

The code is well-structured and uses meaningful variable names throughout so modification should be easy.

To help you find the PROCedures quickly, their names are suffixed by numbers which relate to the first line number, for example, PROC_HAZARD_5 starts on line 5000.

These names and the names of the variables could be shortened and many of the spaces — left in to aid clarity — could be omit-

How it works

100-1000 is the main control routine. It starts each race and check progress by moving driver and track alternately, causing hazards on the way. Delay loop, 160-162, controls how often the driver is moved relative to the speed of the road. So the faster you go the less responsive the steering.

1000-1999 PROC_PROG_START_1 sets keyboard repeat rate, initialises several other routines to set up car shapes etc

2000-2999 PROC_START_RACE_2 sets up initial track, dashboard

3000-3999 PROC_TRACK_GEN_3 draws one mile of track ahead (one row of screen). Arrays L_TRK% and R_TRK% hold size of grass verges. Entry for current mile is used and suitable shapes added to smooth the otherwise jagged appearance

7000-7999 PROC_MOVE_DRIVER_4 checks cursor left and right keys, moves car accordingly, then checks for skid or crash

5000-5999 PROC_HAZARD_5 draws opponents' cars at random intervals, depending on skill level

6000-6999 PROC_RACE_END_6 waves flag, works out average speed, displays current top score

7000-7999 PROC_END_PROG_7 resets all special facilities used

8000-8999 PROC_CHECK_DASH_8 checks (A)ccelerator, (B)rake, gear change (U)p and (D)own, changes speed and gear accordingly, checks for stalling or blown engine. Dotted lines on dashboard show available speeds for each gear

9000-9999 PROC_ON_TRACK_9 tests colour of screen at next car position to detect collisions

10000-10999 FN_FIELD_INPUT_10 prints prompt, checks keyed input for low and high limits, highlights errors, waits for correct input. This is used to select required circuit, number of laps, skill level

11000-11999 PROC_RESULT_PRINT_11 prints stall or skid message and waits

12000-12999 PROC_DASH_SETUP_12 sets up dashboard at start

13000-13999 PROC_WHICH_RACE_13 prints instructions, records skill level, chooses appropriate DATA

15000-15999 PROC_GRID_START_15 sets up initial track

17000-22999 minor PROCedures which control sound of crashes and skidding, dashboard display

23000-28999 minor PROCedures defining special characters to draw cars, flags, track, etc. via VDU23.

BBC PROGRAM

ted. This would result in a faster program, so there is a price to pay for readable programs.

The PROCEDures that define the circuit, cars, dashboard and flags use the VDU23 statement to construct special characters.

As there are so many special ones, I have used the variable USCHR% (user character) to hold the next ASCII code to be defined.

This avoids any confusion when new ones are added.

By giving the colour effects variable names the Teletext print statements are more readable, as in line 32050.

To define a new circuit simply change the DATA at line 3000 onwards.

First, state how many miles there are in one lap of the new track, then supply two numbers for each mile, the left verge and the right.

There should be at least 25 miles per lap, the total of the two verges should not exceed 18 and each verge should be at least 1. The lines holding the REMarks for each circuit must not be moved.

The Brands Hatch track has been left free, so use DATA on lines 30301-30599.

A few tips on playing. Start with the easy circuit, Monza, at the easiest level. As you accelerate remember to change gear at the right time. If you stall change down a gear before continuing. If you blow your engine change up a gear before carrying on. And if you skid on the verge move away quickly.

NOW IN YOUR TIGHT STREET SHOPS

FOOTBALL MANAGER 3D

by Addictive Games

for SPECTRUM 48K AND 2048K

This superb game is now available from branches of W.H. SMITH * and BOOTS.

Manage your own team in this exciting game of skill which vividly captures the drama and excitement of real football

WHAT THE PRESS SAY ABOUT IT:

- * 4 DIVISIONS * F.A. CUP * PROMOTION & RELEGATION *
- * TRANSFER MARKET * TEAM SELECTION *
- * SAVE GAME FACILITY *** AND MUCH MORE! ***

WHAT THE PRESS SAY ABOUT IT:—

IF YOU have always wanted to manage a football team, FOOTBALL MANAGER, from Addictive Games, is for you. The game is ideal for a football fanatic but the most interesting thing for us was the 3-D graphics used to create the goalmouth action. The game is a winner. SINCLAIR USER FEBRUARY 1983

Although I'm no great football fan, I really enjoyed playing this game — excellent use is made of colour and user defined graphics. The game is very logically put together, so that the development of strategy and tactics has a real effect. For example, one of my teams got through to the fourth round of the F.A. Cup where it was beaten by a second division side. This upset morale and meant that our promotion bid failed. Perhaps I should have given up the F.A. Cup run and held some good players back — the possibilities are endless. Brian Clough had better watch out!

* SPECTRUM VERSION ONLY

HL W 13

**Moria 48K
Oric-1 £6.95**

Severn Software, 5 School Crescent, Lydney, Gloucs GL15 5TA

Moria is a milestone in being the first commercial Oric program I have seen to fast load into the Oric.

The Mines of Moria, from the book Lord of the Rings, are the ancient home of Durin's folk, the dwarves. Long deserted, they contain hoards of jewels and gold, protected by ancient and evil terrans.

Your task is to search for Durin's Ring through a number of levels in the mines - represented each time by a grid of 36 squares.

When you meet a monster you can choose to fight or retreat, and wounds and strength levels are recorded. Lose more than 10 lives or less than min strength and you are dead. Watch out - the cassette inlay card tells you to use V for retreat. Not so. It should be F.

To help you in your quest you can buy spells from the wizard or ointment from the trader, at a price.

**Got a taste
for
adventure?**

Carry out feats of courage and daring without leaving your living room with these adventure games

**Zodiac
Oric-1 £6.90**

Tansoft, 3 Club Mews, Ely, Cambridge CB3 2ZT

Zodiac is Tansoft's first adventure for the Oric, and it's pretty good.

The game begins with you being unceremoniously dumped in a city waste. You then have to seek out the twelve signs of the Zodiac, finding new locations and items of interest as you go.

The game seems to have quite a good vocabulary of a low level words and abbreviations, though I did find some of its responses a little on the terse side.

There are quite a few locations to wander around some of which are described in surprisingly lively detail.

Generally I found the game easy to play yet not easy to solve, which is a good combination - a game that won't let you out of the first room soon grows tedious. My only real complaint is that the sound, graphics and colour features of the Oric seemed a bit underused.

	G.P.

**Pharaoh's
Tomb 48K
Spectrum
£4.95**

Phipps Associates, 99 East Street, Epsom, Surrey KT1 1EA

When first loaded, this looks like an attractive adventure game with good clear instructions. Graphics are impressive, with pictures in the top half of the screen and scrolling text in the lower half - a la Hobbit.

The aim of the game is to enter the tomb and collect the treasure from various locations, using the implements you may find there.

But there's only one creeps that I could find, and the treasure and objects were always in the same place. The problems that confront you are pretty easy to solve.

So once you've been right the way through the game there are no surprises left to make matters worse being written in Basic it reacts very slowly. On the other hand it's modestly priced.

	N.B.

**Grail
48K Oric-1
£6.95**

Severn Software, 5 School Crescent, Lydney, Gloucs GL15 5TA

As a knight of the Round Table, you have to explore a five layer maze in search of the Holy Grail. In your wanderings you come across monsters, shields, swords, stairways and the like - and also gold and jewels that you can exchange for strength points and wound healer. Ten wounds, and you're a goner!

Each layer of the maze is shown as a 10 by 10 grid, and as

you move about the screen display shows what items and monsters you have encountered.

The game is well presented in both packaging and program quality. I particularly liked the special typeface that was used for the on screen instructions.

I loaded first time, even on the fast speed, and then auto-run.

All this being so, it's very well put together, but the game itself is more a matter of luck than skill. I found it boring after a while.

	R.S.

**Time Warp
Atari 400/800
£14.95**

English Software, 50 Newton St, Piccadilly, Manchester

This game is supposedly set in a deserted land, ravaged by an evil time lord (Doctor Who's a baddie?) You have to pick up the objects they left behind to translate them into strength, treasure and so on.

Occasionally a spider will attack or rob you, but you soon learn to shoot them (bullets? In

an ancient land?) The game loads in an amazing six parts and it's far more interesting trying to find out why than it is playing the game.

I played for an hour with a friend, reached level 2 of the land, realised it was exactly like level 1, and despaired. I'd like to say something nice about Time Warp, but I can't.

Get out of that... it's not as simple as it seems

Now Get Out of That! is a game more of strategy than of quick reactions. You have the same objective as your opponent, the 48K Oric — to box the other in, so no choice is left except to collide with the trails you have both made

Variables
 CX, CY computer's position
 PX, PY computer's proposed new position
 HX, HY human's position
 D computer's direction
 M human's direction
 V human's score
 Z computer's score
 TS contains opening tune
 S decides whether computer should change direction to give random element

If you are forced to crash the computer scores a point to the sound of a zapping explosion but if the computer is forced to crash you get a point to the sound of pinging

The game is, however, not as simple as it may seem because both you and the computer can wrap around the screen when you move over the edges.

For example, if you go over the top you reappear at the bottom; if you leave the left hand side, you reappear on the right. As the game progresses, and the screen fills up with trails, you have to be careful where you emerge after wrapping around.

If you try to imagine the screen as a diagrammatic representation of a spherical playing area, you will realise how tricky the game can become

How it works
 10 turns off keyclick and cursor
 130-140 calculates new human X, Y coordinates
 150-180 wrap human's position around the screen
 190-210 calculate human's new direction
 240 random direction change
 250-280 wrap computer's position around the screen
 290-310 check if either is trapped
 370-380 computer's new starting position
 400-430 prints playing area
 440-670 instructions
 770-870 sound effects
 PRINT AT facility

You're pitted against the computer in John Wright's game for the 48K Oric-1. Who will crash first?

When the program is run, the cursor and keyboard click are turned off, the title displayed and an opening tune played. Instructions are then given and the message PRESS ANY KEY TO START THE GAME is flashed on the bottom of the screen. On doing so, a border is printed and the score line appears at the top of the screen

You use the cursor keys either side of the Oric's space bar to change direction. You do not have to hold down a key to continue moving in any particular direction. Press a key to change direction

You will see an H and a C appear (Human's piece and Computer's piece), both of them already moving, so be careful not to turn back on yourself at the start of each round. Stop the game using control C.

Note that when the instructions are displayed, all the PRINT lines must be included (as in the listing). This is because double height characters have to be on even number of lines down from the top of the screen. Try leaving out one of the PRINT statements to see what happens.

Also note that line 240 is for the computer to change direction on a pseudo-random basis. It can be changed to:

```
S = INT (RND(1) * 100):  
IF S < 90 THEN 350
```

This will speed up the computer's move time. Line 240 could be replaced by IF RND(1) < .85 THEN 350. Try other values and see the effect. Note that the computer takes a little time to decide which direction to turn when its route is blocked. This gives it the edge when both of you find yourselves boxed in.

The tune played at the beginning of the game is contained in TS and you can alter these

numbers to play a different tune which can be up to 255 notes long. (255 is the maximum string length the Oric can handle).

The machine code held in DATA statements in lines 820 — 850 is POKED to location Hex 400 (or 1024 decimal) using a REPEAT UNTIL loop. This routine is given in the Oric manual on page 128 and enables the exclamation mark to be interpreted by the Oric to mean PRINT AT X, Y; "ORIC".

It is used in the program to print the updated score line. Note that, because the code is POKED to Hex 400, it is protected from being NEWed by BASIC.

You might like to redefine the H and the C characters to give

Hints on conversion
 The Oric screen format is 40 by 26
 PRINT CHR\$(4) sets double height characters
 PRINT CHR\$(17) turns off the cursor
 PRINT CHR\$(6) turns off the keyboard click
 Line 640 the Num NPRESS flashes the line as 3x double height character. Similarly line 700 of LNOW in the 480 sets double height mode 2x to boxes
 PRINT CHR\$(27) gives access to these controls
 INK 7 sets foreground to white
 PAPER 5 sets background to magenta

more interesting shapes, and also to speed up the computer's choice of a new direction when its forward position is blocked

As the program stands, if the computer is moving left to right then D = 9. If this direction is blocked it will look for another direction but it could choose 9 again, thus slowing it down because it has to return again to find another number or give a new direction.

In this game, you have to guide a figure through a maze — but it's not as easy as it sounds!

A number of vertical walls are printed down the screen, with channels in between. Random doors are set into each wall.

These openings in the walls flash for a set period of time at the beginning of the game, during which you must memorise their locations.

After 15 seconds (on the easiest level) the doors close up. You must now guide your figure across the screen using keys S and X to move up and down and E to try to move through the now invisible holes in the walls.

The figure leaves a trail behind him. For each door you

You've got just 15 seconds to memorise the location of the doors in John Powers's game for the standard TI-99/4A. And time gets shorter as your memory improves

Hints on conversion

If you would like to try to convert this program to another machine, remember that the Texas has a 24 by 32 screen, and a good amount of space can be saved by using multiple line statements — the program only takes up 5½k anyway — not available on the standard T.

Here are the more or less common ones:

CALL KEY(M,K,S) Where K is the key, M is the key code, S is pressed with the key. Example: CALL KEY(1,1,1) will set INKEY to 1.

CALL SOUND(D,N,V) Where D is duration, N is note in Hertz, V is the volume. Most machines have some sound capabilities — so it's easier to write your own.

CALL CHAR(A,N,S) Defines characters in Hexadecimal. N is the ASCII character to be redefined. Characters are defined left-to-right from the top. Each digit represents the pattern in a 1x4 horizontal block of pixels; so there are 2 Hex digits for each line of the 8x8 screen.

CALL HCHAR(R,C,A,P) Positions ASCII character A, and repeats horizontally from coordinates C and R P times.

CALL VCHAR(R,C,A,P) As above except repeats vertically.

CALL COLOUR(S,F,B) Defines character foreground and background colour. Replace with GCOL or INK or other command.

CALL SCREEN(X) Sets screen colour. Replace with PAPER or VDU 19 or COLOUR statement.

CALL CLEAR Clears screen. Use CLS.

CALL GCHAR(R,C,V) Returns ASCII code of character at position R,C in table V. Use a POINT or XREF PEEK.

successfully pass through, your score increases by 100. If you try to pass through where there is no door you lose 35 points.

When you eat a fruit (placed randomly in the maze), the doors become visible for five seconds and you score bonus points.

There are three levels of skill. An indicator at top left

shows you current level, you pass onto the next level automatically if your score is high enough. The game is fairly easy to play at the lowest level but it takes a good deal of skill to navigate your way around the harder mazes.

Variables

```

Z row of print position
V columns of print position
CL column of figure
RW row of figure
GC ASCII code from GCHAR
CT column position of wall
RA/RB position of doors in walls
COUNT number of fruit on screen
M# memory maze
FI random position of figure
SC score

TOP RATES PAID FOR HIGH QUALITY PROGRAMS — SEND YOUR MATERIAL FOR EVALUATION AND PROMPT REPLY

Game for a quiet life?

If you want to leave the sound of zapping far behind, these games enable you to use your head, not your trigger finger.

Brainstorm Spectrum £4.95

Micromega, 230-236 Lavender Hill, London SW11 1LE

Two puzzles, Brainstorm and Puzzler, on one cassette. Brainstorm sets you to discover number sequences in which hidden numbers on a grid are revealed individually for a few seconds, then blanked off again.

When you discover number 1, this remains uncovered, and so on for 2, 3 etc, until all the numbers have been exposed in the correct sequence. (You've

probably played this type of game with cards laid face down on a table.)

Puzzler is a computerised version of another game you've probably played before, where you shuffle letters around in a little plastic tray until they're in alphabetical order.

The programs are well written, well crash proofed and well presented, but I don't think they will set any pulses racing. New themes are needed, not old wine in new bottles.

Othello 48K Oric 1 £6.50

Kenema, 1 Marlborough Drive, Worle, Avon

Also known as Reversi, this game involves the capture of opponents pieces by reversing them to your colour. The object is to get more of your coloured counters on an eight to eight board at the end of the game than your opponent. In this version, you can play against a friend, against the computer, or watch as the computer plays itself.

My copy suffered from loading difficulties (even though it was saved at 300 baud) and,

despite several attempts, I could not obtain the on-screen instructions without a program crash.

The high resolution display is well laid out, but for a "thinking" game I fear the sound effects are a little overdone, ZAPs when reversing pieces, PINGs at the end of a move.

Oric's thinking time is painfully slow, and to have the computer play itself gets boring very quickly. Luckily, a human can take over at any stage.

Dallas 48K Spectrum £6

CCS, 14 Langton Way, London SE23 7TL

Do you have visions of nubile nymphets and repulsive magnates doing mega deals over breakfast on the wind-swept South Fork patio? If so, this program has almost nothing to do with it, apart from pinching the music!

It's basically a simulation of oil discovery, well development, and oil production which, if successful, results in your taking over Eung Associates (sic) If you fail, they take you over.

Strangely, the program doesn't auto-run when loaded. When run it reveals a map of an area near Dallas with grid coordinates, together with lots of financial, production info.

You can survey the plots for oil before they come up for auction. If you bid high enough, you then start on the rather long-winded process of well development.

D.M

Code Break TI-99/4A £3.50

Christine Computing, 6 Florence Close, Watford, Herts

Code Break works on the same principle as Mastermind (the game, not the TV programme).

You have 12 attempts to guess a hidden sequence of colours and shapes, and after each attempt the computer tells you the number of correct colours, correct shapes and objects in the correct position. From the information it gives you, you have to work the sequence out.

If you have a TI-99/4A but no Extended BASIC cartridge, this type of game is really your best bet, since fast response is not crucial. Arcade games in TI BASIC are bound to be a washout.

instructions	90%
playability	60%
graphics	40%
value for money	40%

D.G.

Awari 48K Oric 1 £5.50

Kenema, 1 Marlborough Drive, Worle, Avon

Awari is a game with origins in tribal Africa, where it was played with sticks and stones. The rules are very simple, but the strategy is complex. So it makes a fascinating computer game for those who prefer to use their wits rather than their reactions.

In this version, the display is clear and colourful, and the pieces move about at great speed once you or the computer select a move.

Movement is a little too fast to allow a novice to appreciate what is happening, though this is

particularly relevant when, as sometimes happens, the computer gets two moves in one turn, and both moves are taken at once. But at least the computer's move decisions are made in seconds.

The two pages of on screen instructions are clear. However, in pressing SPACE to move from page 1 to 2, delay in removing your finger from the key, and you miss the second page. The only way to get it back is to re-load the program.

D.N.

Wipe out the Tazz — before they do it for you

In a far-off galaxy, under the sickly green light of a rather exotic atmosphere, is the planet Kayloff. The inhabitants, known as the Tazz, are rather peculiar — both as a race and as individuals.

They spend most of their time bouncing up and down. They also tend towards mass self destruction, and congregate in rooms with walls that move in and crush them.

Several years after their entry into the federation, a galactic tribunal ordered them to cease this practice, in case the whole galaxy started to like it, and the galactic economy fell into dust.

You are the Tazzman. Your job is to seek out and destroy all the Tazz who still practise these rituals, without being crushed.

Variables

LWALL,RWALL,LCHAR,RCHAR used by machine code
 DEAD,CRUSH values returned from machine code
 DIFF,DELAY,NUM,TAZZ vary difficulty
 MEM,MYMEM used to access character sets
 SCORE,HISCORE obvious
 X,Y TAZZMAN position
 BX,BY,BVXC,BVYC bullet position
 COUNT,C,I,J general purpose

Your opponents in this game are a self-destructive race called the Tazz. You may want to destroy them — but not as much as they want to destroy themselves. Race against time in Marc Freebury's program for the Atari

This game is for Atari computers with joysticks.

You must enter the rooms of moving walls, and shoot the Tazz. The walls and Tazz are radioactive, and must not be touched. Shoot by pressing the fire button, then pushing the stick in the direction to fire

The Tazz are worth 10 galactic credits each, but you lose 10 if a Tazz succeeds in being crushed. When all Tazz are destroyed, exits will appear for you to make your escape to the next room. As you progress, the walls move faster and the Tazz militants become more

numerous. Can you stop the Tazz?

Tazz fits into 8k of memory, and must be typed as shown but without the REM statements. This is ultra-important.

When typed in, save the game, then type PRINT PEEK(140)+PEEK(141)*256. If this gives a number larger than 8099 (roughly), then the game will crash. Cut all unnecessary statements from the game — this does not include the front page, which is accounted for. Tazz incorporates character set redefinition and switching, with a little machine code to keep the game moving at a brisk pace

How it works

100-120: READ, RESTORE
 Character set redefinition, machine installation.
 200-250: FRONT PAGE
 Difficulty level is automatically incremented and not alterable from here.
 330-640: SET UP SCREEN
 This draws the screen, places the TAZZ and sets up the necessary constants.
 650-710: MAN MOVE ROUTINE
 720-800: FIRE BULLET ROUTINE. Man may not move while bullet is active.
 810-830: ALTERNATE THE CHARACTER SETS
 840-860: SHOOTING SUBROUTINE
 Counting and moving walls to the centre of line
 900-1200: BONUS LINES
 Characters, machine code

Hints on conversion

This game will not lend itself to any ready converters. The best thing to do is to take the principle of the game and design your own code around that. Best of luck.

Reaching scores of over 2000 and getting past screen 8 means that you are a true Tazzman.

TEST YOUR SKILL, PIT YOUR WITS OR JUST TRY OUT YOUR SPIRIT OF ADVENTURE!
HAVE YOU GOT LIGHTNING REACTIONS? HOW ARE YOUR POWERS OF DEDUCTION?
WHAT IS YOUR IQ?

We have the hottest computer games on earth for you to take yourself to the limits and find out the answers to these questions . . . and more!

TRY OUR GRAPHIC ADVENTURE GAME

STARSHIP ESCAPE FOR THE VIC20 WITH 16K EXPANSION

A Competing and Exciting Real Time Graphic Adventure in Machine Code. You are the lonely pilot of a Federation starship scout ship on routine patrol. While traveling through a little known sector of the galaxy you are confronted by a gigantic alien craft. Before you can take evasive action a powerful tractor beam draws your craft into the alien ship. Your craft is disassembled and each part is put in a different room of the ship. Now your quest begins. You must move from room to room in search of each part, overcome the dangers there and bring the parts back to the airlock where you must reassemble your craft and make good your escape. Programmed in Fast Machine Code. Hi-Res Colour Graphics. Superb sound effects. Joystick or keyboard control. 4 levels of play. **Price £7.95**

POPULAR ARCADE STYLE GAMES FOR THE UNEXPANDED VIC20

SKRAMBLE — Your task is to divert your aircraft into the enemy's underground base and destroy their installations and guided missiles with your bombs and laser cannon. If you survive the first stage a storm of fireballs appears in your flight path and the only action you can take is evasion. Superhuman pilots have been known to continue bombing and shooting the enemy while out-maneuvring the fireballs. Programmed in Fast Machine Code. Hi-Res Colour Graphics. Superb sound effects. Joystick or keyboard control. Progressive difficulty of play. **Price £7.95**

JUMPIN' JACK — Cross a busy road and treacherous river and guide Jack the frog home to his riverside bays. Why you may ask does he have to get across the road and river when he could just where he is in safety? As is explained when we tell you that his wife is waiting for him on the other side. This program is probably the best Frog pub arcade game there is for the unexpanded VIC20. Multicolour Hi-Res Colour Graphics and novel musical sound effects are used for the first time in our most popular games. Complete with cars, trucks, logs and turtles. Operates from the keyboard or joystick. Progressive difficulty of play. Bonus levels. **Price £7.95**

TRAD — Defend your base against the suicidal fleets of alien hoverships. The game is the space battle. Galaxions and you will need accurate control of your laser cannon to defend your base against constant bomb attacks. The best version of this exciting arcade game on the VIC20. Hi-Res Colour Graphics. Superb sound effects. Joystick or keyboard control. 5000 points bonus flags. Programmed in Fast Machine Code. Hi-Res Colour Graphics. Great sound effects. Joystick or keyboard control. **Price £7.95**

GRIDTRAP — Your man has been placed on a grid of traps which open after he walks over them. His object is to reach and defuse a time bomb in less than 60 seconds. Further hazards are presented by a series of mines scattered around the grid which cannot be walked on and a wandering 'BOOT' which must be avoided. The more you play this one the harder it gets as more 'BOOTS' appear. Bonus flags are set around the grid when he walks over them and a 'BOOTS' at 100,000 points. Programmed in Machine Code. Hi-Res Colour Graphics and novel musical sound effects. Joystick or keyboard control. Progressive difficulty of play. **Price £7.95**

ASTRO FIGHTERS — A Space duel for two players at once. Probably the only VIC20 game of its type where one player uses the keyboard and the other a joystick. Each player must duel against his opponent and destroy his Astro Fighter. Each battle takes place in a different sector of space and the computer also plays against the two players by placing the ships amongst dangerous sectors of space. Programmed in Machine Code. Hi-Res Colour Graphics and exciting sound effects. Game time selection. Joystick essential. **Price £8.95**

SCORPION — The scene is the desert and you must defend yourself from a trail of scorpions which wind their way down to your position through scores of poisonous cacti which give off deadly spores. As each scorpion is led the trail breaks up and they attack individually as they reach you. The cacti must also be destroyed as they are giving cover to the scorpions. A deadly spider also makes its way across your path and must be out-maneuvred or destroyed. A very fast moving and exciting game programmed in Machine Code. Hi-Res Colour Graphics and sound effects. Joystick or keyboard control. **Price £7.95**

SPACE RESCUE — The crew of a stranded survey ship have to be rescued from the surface of a remote planet by a shuttle craft from another ship. The shuttle has to be guided through a storm of meteors and landed on one of three landing pads where the crew may board. The return trip to the mothership has to be completed while avoiding the meteors again. Your craft has a limited amount of laser power and some of the meteors can be destroyed as you plod through the storm. You will have proved yourself a skilled pilot if you survive the trip and bring the whole crew back to the mothership. A very good version of the popular arcade game written in Machine Code and using Hi-Res Colour Graphics and sound effects. Progressive difficulty of play. Operates from a joystick or the keyboard. **Price £8.95**

CHOPPER — The scene is a battleground and you are the pilot of an attacking helicopter. Your task is to bomb tanks, trucks and gun emplacements and avoid their attacks of anti aircraft fire and guided missiles. Your task is made harder by the steep sided valley of the battlefield. Programmed in Machine Code. Hi-Res Colour Graphics and sound. Progressive difficulty of play and Joystick or keyboard control. **Price £8.95**

PUZZLES PACK — A compendium of six intriguing puzzles, games and IQ tests for the unexpanded VIC20. Specially written by an expert in puzzles to be both entertaining and educational for all ages. Programs include: DRB TS, KNIGHTS MOVE, GRAPHIC TWISTER, RAINBOWS, SLIDE PUZZLES, DIGITS.

DESTROYER — Command HMS Victory in an air and submarine attack. Machine Code. Hi-Res Graphics. Joystick NOT required. **Price £7.95**

WESTERN — The classic western shoot-out. Two players together or one player against the computer. Machine Code. Hi-Res Graphics with sound. Joystick or keyboard. **Price £8.95**

BULITRON — Lightning responses are demanded when manning the user cannon of your galactic starfighter as it comes into combat with a variety of creatures who guard the space lanes to their star system. Your task is to penetrate their defences and destroy each adversary before they destroy your ship. If you survive each attack wave and the deadly Tri-missiles you will have to navigate along a winding space corridor. One false move and your ship will be disintegrated by the anti-matter field. An exciting and amusing game written in Machine Code. Hi-Res Colour Graphics with sound effects and Joystick control. **Price £7.95**

AVAILABLE SOON FOR THE COMMODORE 64

JUMPIN' JACK — Our very popular Frog game now on the 64 with numerous features: Snakes — Crocodiles — Lady Frog — Two player options — Multiple levels of play — Switch or analogue joystick operation — Keyboard operation — Sprite Graphics — Hi-Res Multicolour Mode Graphics — Synthesiser Sound. **Price £8.95**

Backing up the electronic granny

ASK's founder thinks that children will soon do most of their learning at home, with the aid of their friendly micro. MD Peter Lever told Candice Goodwin how ASK is catering for the home schoolroom of the future

Last month Kenneth Baker announced to a waiting world the publication of a book called *Wealth of Information*. Written by Professor Tom Stonier of Bradford University, it predicted among other things that children will increasingly do their learning in the home, via their "electronic grandmother" the microcomputer.

School, Stonier argued, would become a place where children learn to mix socially and where they can discuss what they have learned at home.

Not content simply to put his ideas down on paper, Stonier had decided to set up a software company whose sole aim would be to produce educational software for the home. He talked investors Jeremy Raphael and Tom Blumenui into putting up the money, recruited businessman Peter Lever to set up the company, and Applied Systems Knowledge — ASK for short — was in business.

ASK's first four programs, all for the VIC-20, appeared on the market in August last year. Now it has 10 VIC programs, and has just announced four for the BBC micro. Aimed at children aged three-12, they are designed to teach basic concepts like number, shape, and use of vocabulary. Ultimately, ASK wants to provide programs for all ages, up to and including adult education.

But the company doesn't want people to think of its products like computerised textbooks. According to ASK's marketing manager Joe Duignan: "Just putting books straight on to a new medium would be a waste. Our programs owe nothing to textbooks. They're interactive, rather than passive.

"The programs aim to help children understand concepts rather than pass exams." They're also intended to be fun to use, so that children will as Joe puts it "learn by stealth. Children shouldn't know that they're learning."

An electronic grandmother may not sound very friendly, but Joe argues that "the impersonality of the machine is in fact an advantage. The computer doesn't criticise you — it doesn't destroy your expectation of yourself."

The "scripts" or specifications for ASK's programs are all written by working teachers. One of their authors for example,

Gloria Calloway, is head teacher of a primary school in Hackney, north east London.

When the script has been drawn up, it is discussed with ASK's consulting editor Mike Thorne and graphic designers Mike Barrett and Piers Letcher. Then it is passed on to one of the company's six full-time programmers, who work under the guidance of technical manager Ian Morton at the company's headquarters at 68 Upper Richmond Road, London SW15.

Once the program has been written, it is tested in schools in Cambridgeshire and north London — and ASK's employees try it out on their kids, too. Not until everyone is satisfied is the program released on the public. The whole process takes about six months on average.

In making sure that the programs are educationally sound, ASK doesn't want to neglect the business side — hence Tom Stonier's decision to take on Peter Lever as MD. Peter's background was in commodity trading, so the software market has been a new experience for him — though not, he says, a bad experience.

But it was business know-how rather than computer experience that Tom Stonier was after. "Tom wanted professional teachers and computer people involved. But he wanted good business people too, who knew

Peter Lever recruited for his business know-how

Technical manager Ian Morton

how to apply business concepts to the product. It isn't enough just to build a better mousetrap."

ASK's programs are currently sold both by mail order and in High Street shops. Its VIC programs are marketed jointly under ASK's and Commodore's names, and this is a policy the company hopes to continue in future with software for the Dragon, Atari and TI-99/4A.

"That way, we can take advantage of the computer manufacturer's marketing organisation and concentrate on producing good programs ourselves", Peter said. "But we'll have to be careful not to lose our identity."

The programs are selling well in Australia, South Africa, New Zealand and Spain, where they have been translated into Spanish. In fact, they're selling better overseas than they are in the UK at present. Why should this be?

Peter Lever said: "The market here is slow because people haven't yet made up their minds what they want a micro for.

"There are two schools of thought. One sees a micro as an in-house pin-table. The other is that the micro is for learning to program. People haven't yet perceived that it can be useful in education."

**Bridge Master
Spectrum
£24.95**

Bridgemaster, PO Box 163, Slough

What a delight to encounter a really professional program for a microcomputer! Bridge Master is well conceived, smoothly executed, and aimed with accuracy at a worthwhile objective

Four double-sided cassettes are supplied, with an instruction book and Begin Bridge with Reese, by Terence Reese. Two of the cassettes talk to your computer, and the other two talk to

you, giving a smooth commentary to guide you through the intricacies of 55 bridge hands.

You can play each hand yourself, a subdued beep telling you when you try to play an unsuitable card, or you can let the computer play for you, taking the rounds at any pace you choose. The bidding of some hands is covered, though this is not introduced in the earliest hands.

For a learner, this offering is ideal. For those who already play, there is much value, rather on the lines of the old 'Auto Bridge' system, but much more extensive. True, there are only the 55 fixed hands, and each hand can only be played one way, but it would need a gargantuan feat of

Food for thought

If you're feeling intellectual, these programs are designed to bend your mind. Here are our reviewers' thoughts on them...

memory to recall the characteristics of each.

There was only one hunt of trouble. It so happened that the first cassette was loaded after a program which had set PAPER BLACK, and that produced much mystification, as the bridge program does not set the required PAPER WHITE condition. A minuscule point, but with a program so perfect in other respects it rather stood out.

**Black Box
TI-99/4A £6**

Stainless Software, 10 Alstone Road, Stockport, Cheshire SK4 5AH

Black Box is the scientific version of Mastermind. Originally a board game, it transfers well to a computer.

You use your powers of deduction to locate a given number of atoms (up to 10) which are hidden in an 8 x 8 grid. There are 32 rays positioned around the edge of the grid which are used to detect the co-ordinates of each atom, depending on whether a ray is absorbed, deflected or reflected.

When you think you know where the atoms are, you enter your guesses. A score is given based on the proportion of atoms you track down and the number of rays you use.

Understanding exactly how rays are deflected and reflected took time to fully comprehend. The instructions give full details on the origins of the game, but provide only a few sentences and one example for the complete beginner.

**Match Wits
TI-99/4A £7**

Pewterware, from Stainless Software, 10 Alstone Road, Stockport, Cheshire SK4 5AH

Loosely based on the card game Pelmanism, Match Wits is a memory testing game for two to four players.

Each player has a field of 12 coloured squares that conceal six pairs of abstract pictures. In turn, each player attempts to uncover a match for a random picture in the centre of the screen, to score one point.

If a player reveals both of a pair of pictures then that player has the chance to uncover a

square on a different player's board, to gain two bonus points. There are two skill levels to the game — the higher level uses less easily distinguished shapes in one colour, but is otherwise similar.

Good use is made of graphics and sound and the game was fairly absorbing once the barely adequate instructions were fathomed. You could of course play the same game with a pack of playing cards — but that's progress!

**Backgammon
Dragon £8**

Microdeal, 41 Truro Road, St Austell, Cornwall PL25 5JE

A machine code version of Backgammon with high resolution graphics and full colour.

There are nine levels of play. A game can be played against a friend, the computer, or you can sit back and watch the computer play itself. The computer throws the dice or you can input your own moves.

Apparently you can use a Microdeal light pen — I don't possess one so I didn't try this op-

tion. There is even an option to switch off the sound — good thinking, Microdeal! Actually the sound effects are quite good.

I played many games using different options each time and found each game thoroughly enjoyable. This is an excellent representation of the game with good presentation on screen.

Three Games For Children
48K Oric-1
£7.95

Burslem Computer Centre, 74 Waterloo Road, Burslem, Stoke-on-Trent, Staffs ST6 3EX
One of the main difficulties in writing "educational" software is getting the right mixture of challenge and interest. Without either of these the child soon loses interest. 'Three games for children' (not the greatest of titles) scores highly on the former but falls down rather on the latter.

The program loaded first time and then offered a choice of three options — counting shapes,

spelling colours or, rather strangely, typing

Counting shapes draws some nice geometric shapes onto the screen and asks how many of each there are. Spelling colours produces three large numbered shapes and asks, in turn, for the child to spell out what colour they are.

The final game appears to be rather out of place on a educational tape.

Learn a thing or two from your micro

Younger members of the family can use the micro too, with games that will teach them maths or improve their spelling.

Word Build
32K BBC £5.95

GTM Software, 864 York Road, Leeds, Yorks

Educational programs are improving all the time. This program, is an advance due to the carefully-planned display, superior error trapping and user friendliness.

Clear, detailed instructions come with the cassette and are reinforced on screen.

The program offers a menu of four sets of words (House, Animals/Birds, Games/Toys and miscellaneous words) each with three levels of difficulty. Words range from cat to flam-

ingo and are displayed with letters "rearranged" in alphabetical order

The player has to reorganise the letters to spell the correct word, a score is kept and a picture of a house is built up as each correct letter is entered

Colour is used and sound is optional. The program was well received by pupils in my local school and the teachers were impressed by the ease with which their own word lists could be substituted.

Words, Words, Words
VIC-20 plus
16K £8.95

ASK, London House, 68 Richmond Road, London SW15 2RP

Children do have fantastic imaginations. If they use them for making up a story and making up for the limitations of VIC graphics they'll love this program

The idea is to practice spelling for five-eight year-olds using scenes chosen from a street, farm, city, orchard, field meadow, house or castle. Objects appear, and if you complete the line "I see a "

with the correctly-spelled word, the object joins the scene. You're allowed two goes and a certain number of alternatives are permitted. man or farmer, lorry or truck. While some objects are easy to identify, some are more problematic. Is it a man or a boy, dog or cat and is that really meant to be an ant? For the adult assistant there is a dictionary of the 50 or so words that appear

Hide and Seek
VIC-20 plus 8K
£8.95

ASK, London House, 68 Richmond Road, London SW15 2RP

This is a game with educational aspirations. It describes itself as a variation on Pelmanism — you know, turn over the cards from a face down pack trying to get a pair. It develops your short term memory, so they say.

With a nominal age range of five to 12, I fancy that many older and even some younger will get fun out of it. My three year old and I did.

In fact, it's two programs, side A for beginners, side B for advanced. Basically you see things put in boxes, then have to remember what went where

Side A has six boxes with objects like a clock, a pig, a fish to remember. Side B has nine boxes and you choose between nine flowers and nine faces as the objects. It also offers five grades of difficulty, from hard to super hard (like it!)

The graphics are excellent, the instruction book clear.

What's the use of your micro?

These programs have an answer for anyone who's asked what home computers can be used for

Vu-File BBC cassette & disc £14.95

Psion, 2 Huntsworth Mews, Gloucester Place, London NW1 6DD

First go and buy Vu-file before they sell out!! Then read on. Vu-file is so versatile I can't list all the possibilities. But the main idea of the program is to provide a user definable data base, in which you can set up a screen format of your own design and then enter in data. This can then be saved to tape, or disk. The whole file is loaded into working memory, so it is limited

in size to 16k, but some very sophisticated methods are used to pack an awful lot in there. The demonstration file supplied, Gazetteer, has 152 records and eight fields and still only uses 63% of memory!

To say the program is well documented is an understatement — it comes with the best user manual I've ever seen. Every option is covered by this booklet

Comp-U-Share 48K Spectrum £9.95

Micromega, Quantec Systems & Software, 230-236 Lavender Hill, London SW11 1LE

This investment management system is provided in an attractive purple box containing the master program and a 19-page user guide. It doesn't include the extra cassette(s) you will need to hold the files of data on your shares. Up to 36 investments (shares, loan stock or unit trusts) can be 'managed' by this program. The program doesn't advise on which investment you should make. Its main purpose is

to calculate most of the ratios investors need, and analyse gain and earnings, to aid decision making in investments.

The file will only store information at the time of share purchase and current details. This allows now and-then comparisons to be made, but you will not be able to get any trend analysis. However, data from a number of points in time can be stored as separate files.

An almost identical version is available for the ZX81

instructions	80%

Key Trainer 48K Oric 1 £5.50

Kenema, 1 Marlborough Drive, Worle, Avon

This program took seven minutes to load. After trying it out, I'm not sure it was worth the wait.

The tape contains eight exercises in using the keyboard, of progressive difficulty, sort of. Instructions for the first six are included in exercise one, though you're not told this.

To start with, you hit any key, and the computer confirms it! From then on you have to press the key corresponding to one chosen at random by the

computer — the further you've progressed, the greater the selection it chooses from. When you've had enough, you can look at your percentage success rate and get back to the main menu.

The last two exercises are slightly different. In exercise 7 you type in 1 to 10 lines of text, which are then justified as in a word processor. Exercise 8 simply requires you to copy the text you have just typed in. I couldn't see the point of this.

Beebsynth BBC B Cass. £7.95 Disc £10.95

Clares, 222 Townfield Road, Winsford, Cheshire CW7 4AX

What is Beebsynth? Having played with it for hours, I can safely say I think it's two programs for the price of one — a rare event these days.

The first part is a utility to help you design sounds for inclusion in games, or for use in the second part of the program. You can change all the parameters of the sound envelope either singly or in steps of ten, and when you've got the effect you want, see the command to produce it

displayed at the top of the screen. The second part turns your micro into a music keyboard. I spent many happy hours trying it out and annoying the dog with a selection of high pitched discordant musical sounds. As for a more musical friend of mine, his reaction to the wildly varying possible sound combinations was only tempered by the restrictions of the keyboard layout.

Best for software — every week

ORIC-1
KEY TR

A switch in time for your Oric-1

You won't find any mention of system variables in the Oric-1 manual. A minor omission, you might think, but as I will demonstrate, the addresses and function of these variables can be very important to programmers.

You can't get this information from Oric Products. When I requested details, I was curtly informed that the Oric's system variables are secret! So it's up to programmers to find it out for themselves.

This article is about some of the variables which I have discovered. As the title suggests, they concern switches and time.

When Oric 1 is powered-up, the machine is in CAPS mode, and the keyboard sounder and flashing cursor are turned on. These (and other) functions are switched on and off by a 'toggle switch' action from within a program (with a PRINT CHR\$(x) command), or direct from the keyboard with the CTRL key.

This turns on a function previously off, and off if previously on, but does not exert absolute control of these functions.

This limitation is acceptable if every program is loaded into the computer straight after power-up, when the status of these functions are known. However, it would be very inconvenient to disconnect the power and reconnect in order to reset the machine every time we wanted a new program.

The system variable at address 618 contains 'flags' which indicate whether some of these functions are on or off. These are shown in table 1.

The way to control these functions within a program is to POKE an appropriate value into address 618. These values can be calculated from the table.

For example, if you wanted to have the flashing cursor on and keyclick off (with VDU on and double height and escape off), add up the appropriate values in the table (1 + 8 + 2 + 0 + 0 = 11), POKE 618,11 ensures that the cursor is on and keyclick is off. For cursor off and keyclick on, you would use POKE 618,2.

The 'flag' for CAPS lock is bit 7 of byte 524. I'm not sure of the purpose of the other bits, so I would suggest the following program line.

```
IF PEEK (524) > 127 THEN
PRINTCHR$(20); to ensure
that CAPS lock is off, and
IF PEEK (524) < x + & THEN
PRINTCHR$(20); to turn on
CAPS lock
```

Time is an important element in many games; a task has to be accomplished within a time

this 'clock' is set to a high value at the start, and the value at the end is examined. The time, in seconds, is the difference divided by 100.

For example, start the clock with the command POKE 630,65535 (which is the highest possible value).

The time elapsed at the end of a game is
 $TIME = (65535 - DEEK(630)) / 100$ (seconds)

If you are checking for a time limit, use a line such as
IF PEEK(630) < 65535 - 100 *
TIMETHEN

where TIME is a pre-defined variable equal to the time limit in seconds.

Note that, as the system variable drops by 100 every second, it will take 655 seconds to drop from the highest possible value to zero. The value to follow zero is 65535. Therefore, this timing method can only be used for time periods up to 10 9 minutes.

A final Oric tip: the system variable at address 520 holds a value which varies according to which key is pressed. If no key is pressed, the value is 56. The BASIC command KEYS does not work as smoothly as the manual suggests. So, if you have a game in which you wish to check for any keypress, the line
IF PEEK(520) <> 526
THEN

is better than
IF KEYS <> "" THEN

If you have discovered other Oric system variables, why not write and tell us about them. Then we can let everyone in on the secret!

Want to hear a secret? To make would-be programmers' lives easier, David Nowotnik reveals some of the Oric-1's hidden system variables

Table 1 — some Oric 1 'toggle switch' functions

Function	PRINT CHR\$(x)	CTRL key	Byte on	618 value off
CAPS lock	20	T	—	—
Keyclick	6	F	0	8
Flashing cursor	17	Q	1	0
VDU	19	S	2	0
double height	4	D	64	0
(escape	27	—	16	0)

Although 'escape' has a flag in byte 618, it is not strictly a 'toggle' function.

limit, or success is a measure of the time taken.

The calculation of time on the Oric 1 makes use of the system variable at addresses 630 and 631. The value of this variable drops by 100 every second.

Therefore, to measure time,

Close encounters of the hostile kind

Intergalactic harmony is the last thing on the minds of the aliens in these new action games.

PS Pesteroids TI-99/4A £10.00

PS Software, from Stainless Software, 10 Alstone Road, Stockport, Cheshire

"Your ship has entered a mysterious zone of shifting reality. Wave after wave of strange objects drift through this starless void endangering your ship." Asteroids, in other words.

It's true to say that as the game progresses, the asteroids adopt some very strange shapes indeed, including, at one stage,

the logos of rival computer manufacturers.

Colour graphics are adequate, making extensive use of Extended BASIC's sprites facility. Sound effects could be improved, though.

Dedicated asteroids addicts will probably find this game too slow and easy. But it's worth a try for less skilled gamers.

TI BASIC

Bug Bomb BBC B £7.95

Virgin Games, 61/63 Portobello Road, London W11

Fancy deliberately putting bugs in a program! This is an entomologist's nightmare (or dream, depending on his suicidal tendencies)

You move around a grid trying to destroy the power sapping bugs. Touching a bug loses one of your three lives — they also fire back at you. You have up to three mines which are launched behind you and continue to move in that lane until hitting a bug or yourself.

The screen layout was sim-

ple, with good use of colour and sound, and the keys were very responsive. A bit too responsive, perhaps — I found it hard to launch one mine at a time and often had two or three travelling in line.

Mission Mercury VIC-20 £7.95

Virgin Games, 61/63 Portobello Road, London W11

First the bad news. Mission Mercury turns out to be just a boring old rescue scenario. You have to rescue marooned humans from a planet surface by steering a small shuttle craft through a meteor storm.

The good news is that the game is well written, with nice smooth multicolour graphics. The animation is well thought out and effective.

I found it enjoyable to play, if difficult to maintain interest. If Virgin can keep up the quality, but spice their products up with a little more originality, they should do well in their new venture.

Space Adventure BBC B £7.95

Virgin Games, 61/63 Portobello Road, London W11

Not just an adventure, nor yet a reaction game, but a bit of both. You must wander the rooms of an alien spaceship, collect four keys to locked rooms containing crystals, grab them and escape.

Out to thwart you are robots which must be destroyed. Once your life support or weapons are exhausted you expire, but power packs are dotted around to revitalise you.

This is a first class program, with instructions on both insert and on screen. Graphics, colour and sound are superb. The status display is easy to read and gives you all the information you need (including a map with your present position).

The only problem I had with Space Adventure was in prising my friends away from it.

The sound of breaking micros

Do other computer enthusiasts share my problems? I've tried every computer, and they've all had their snags. Jelly and tea have fallen down through the keyboard, ruining the circuitry and chips.

I've had a wobbly RAM pack, the electricity goes off every 10 minutes, I lose colour and picture from my television, and all my tapes get chewed up either by my brother or in the cassette recorder. Could I possibly be accident prone?

Because of these difficulties I've damaged not only my own but also my friends' computers, thus losing my friends.

It has got to the stage where even my local computer dealers say they'll phone the police if I step into their shops.

Has anyone got any ideas for a computer which is unbreakable and which you get out of a corn-flakes packet (no, not a ZX81 I've already tried that)?

Should I commit suicide? Perhaps I should never have taken up computing as a hobby. Oh hang it all!

Over Desperate, Belfast

East Londoners club together

The East London Amateur Computer Club meets on the second and fourth Tuesday of each month in the main hall of the Harrow Green Library, Leytonstone. Meetings start at 7pm, and visitors are welcome.

The first meeting in the month is usually a talk on micro-related subjects, and the second meeting gives members a chance

to discuss problems, ideas, and programs.

Micros of all types are shown, including Beebs, Uncle Clives, TRS80, Nascom, Pet Sorcerer, Apple, Dragon, Oric, and a 7768 (mine).

On the last Thursday in the month we have a special meeting for user groups, and a lecture on Basic for members.

The current membership fee is five pounds a year, half price for juniors and pensioners. Anyone interested in learning more about the club should ring the chairman, Fred Linger, on 554 3288, or myself on 558 3681. J. Turner, London E11

Interface intrigue

We ordered the Sinclair Spectrum RS232 C interface from Cobra Technology, and waited 12 weeks for it to arrive, even though our cheque was cashed immediately.

Despite what it states on the packaging, the Cobra interface will not allow you to use LPrint or LList — surely the main reason for buying such a product.

Despite a personal visit to Cobra and several telephone calls, we have not received a refund.

Automata has been in the micro business a little longer than most. Behaviour like Cobra's harms all of us, and we see it time and time again, from the biggest in the land down to the back street cowboys.

To all of you in the micro industry — you must not advertise goods that are not readily available, you must not stick money in the bank before your despatch the goods, and you must not mislead the customer by your advertising.

Automata, Portsmouth, Hants

Jack Allison of Cobra said: "We have never claimed that the Cobra Interface will do LPrint or LList — if Automata had asked us about that before ordering, we would have told them. If Automata want their money back, they can have it — but they haven't asked us for a refund."

"We have production problems, like everyone else, due to a shortage of 6850 chips. But we sent Automata a word processor package with the interface to make up for the delay."

Why you should dissect your games

Having just read One Man's View in HCW no 15, I would like to make a few points.

Firstly, Mr Foreman compares learning to program to knowing what is going on under a car's bonnet, and argues that you don't need to know how the car works to "drive thousands of miles". While computer owners need not know how the electronics of computers work — I certainly don't — they do need to know about the program that "drives" the computer.

Secondly, it is all very well for the computer owner who is only interested in games not to understand programming, but business users need to understand the jargon in order to know whether they will need a disk drive, a GP/M-compatible computer, 48K or 1148K of RAM.

Thirdly, though I am interested mainly in games, I have learned a great deal through learning to program, and hope to make a career out of it.

So, all you games players — do dissect games if you want. It is most rewarding, especially if it enables you to subsequently write your own games and programs. And who knows? it may provide you with a job in years to come.

David Lester, Pinner, Middlesex

★ Software winner

Is your reviewer crazy?

May I assure your readers that it was not a bug that prevented your reviewer from mounting the lifts in the third screen of Krazy Kong, as thousands of customers who have bought this game will testify. It requires perfect timing and that is all. It is always difficult to create a game that will provide enjoyment and excitement for a length of time yet be easy for a beginner.

I must also correct your reviewer over Pharaoh's Tomb. You do not have to reload the programme again if you meet sudden death. You just answer the question. Try again.

Now they'll talk our language

I suppose this item does not strictly fall under the heading of what you consider home computers, but it will certainly affect a lot of homes over here

In the last month, Prestel has restructured its marketing and distribution plans. Unlike all other videotext-like services, Prestel is no longer running on a mainframe computer. After outbidding the competition, responsibility for making the service profitable has been taken over by Torch Computer Ltd

Now, instead of running on a centrally located GEC mainframe, the Prestel database will be run from a network of Torch computers connected to 40Mbyte disc drives, each of which can apparently store up to about 40,000 text screen pages. When it was first introduced, Prestel was received with something other than wild abandon. I feel that this was probably due to the fact that the initial database was mostly European, and therefore not entirely relevant to our needs

Torch feels that by creating local and therefore more interesting and relevant data bases that interest can be renewed. Torch must do this all on their own, as apparently no more money will be put into the project by Telecom. I believe that if Torch can indeed come up with a relevant data base, that they have every chance of being successful

Unitronics, a company based in Oakland, California, has introduced a new home micro with a built-in "stringy-floppy." The product, called the Sonic Home Computer, is expected to be able to run Apple II and CP/M software in addition to those created especially to run on the company's proprietary operating system called "Rosy." The computer is expected to cost less than \$200, and will be out around September

This computer takes advantage of the "Waferdrive" device which I described in last week's column. The drive can store up to 128K, and can be expected to load a 48K program in less than 20 seconds

The unit will allow memory expansion up to 80K RAM, will accept Atari compatible joysticks, has an RS-232 port, and will also accept a disc drive. Using a 6502 microprocessor, the unit will have 16 colour capability, will display upper and lower case in 40 columns, and will have a 70 key typewriter-like keyboard having 10 special function keys, and will use 4K of ROM to auto-boot the machine and load programs from the stringy floppy

The machine will come with a great deal of software included in the price. This includes the software for the Waferdrive, BASIC by Microsoft, a spreadsheet program, a word processor, and game software, with CP/M to follow shortly. The unit will also be offered with an adapter enabling Atari and Colecovision game machine owners to link their machines to the computer

In this way games, presumably in progress, can be stopped and saved to the Waferdrive. Unitronics is planning to release games for the Atari and Coleco machines on special game wafers

This same company is also getting ready to announce an expansion unit for the VIC-20 which will have a built-in 64K Waferdrive. The device will look like a disc drive to the VIC

They are working on developing similar units for the Commodore 64 as well. I will let you know what happens when the machine actually hits the marketplace

Out of space again. See you next week

MAIL ORDER PROTECTION SCHEME

If you order goods from Mail Order Advertisers in this magazine and pay by post in advance of delivery, this publication will consider you for compensation if the advertiser should become insolvent or bankrupt, provided:

1. You have not received the goods or had your money returned; and
2. You write to the publisher of this publication explaining the position not earlier than 28 days from the day you sent your order and not later than 2 months from that day.

Please do not wait until the last moment to inform us. When you write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers made in accordance with the above procedure as soon as possible after the advertiser has been declared bankrupt or insolvent to a limit of £1,800 per annum for any one advertiser, so affected, and up to £5,400 p.a. in respect of all insolvent advertisers. Claims may be paid for higher amounts, or when the above procedures have not been complied with, at the discretion of this publication, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of reader's difficulties.

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payments made in response to catalogues, etc, received as a result of answering such advertisements).

CLASSIFIED ADVERTISEMENTS ARE EXCLUDED.

HAVE YOU EVER HAD THAT DREAM OR EVER WISHED THAT YOU HAD "WON ON THE POOLS" – AT LAST YOU CAN TURN IT INTO REALITY

THERE IS A SECRET OF "HOW TO WIN ON THE FOOTBALL POOLS" – IT CAN BE DONE. I DISCOVERED THE SECRET A LONG TIME AGO – NOW, FOR THE FIRST TIME I'M PREPARED TO SHARE IT WITH YOU.

HOW DOES THIS INTEREST YOU – I HAVE DOCUMENTARY EVIDENCE BY WAY OF POOLS WINNINGS DIVIDEND SLIPS/CANCELLED CHEQUES, etc, SHOWING MY PRESENT WINS ON THE POOLS AS FOLLOWS:

FIRST DIVIDENDS	SECOND DIVIDENDS	THIRD DIVIDENDS	FOURTH DIVIDENDS	FIFTH DIVIDENDS	SIXTH DIVIS.
765	1,818	2,942	1,952	631	93

A GRAND TOTAL OF 8,201 (EIGHT THOUSAND, TWO HUNDRED AND ONE DIVIDENDS – so far).

PROGRAM THE SYSTEM INTO YOUR COMPUTER - WHATEVER ITS MAKE - THEREBY ENSURING SECRECY AT ALL TIMES.

I HOLD THE UNCHALLENGED WORLD'S RECORD FOR POOLS WINS.

I AM MAKING THIS VERY SPECIAL, REDUCED OFFER TO READERS OF HOME COMPUTING WEEKLY FOR A LIMITED PERIOD ONLY

Do not let anyone tell you that it is impossible to "WIN ON THE POOLS" – since I perfected my method, I HAVE won REGULARLY for over TWENTY-FIVE YEARS – proof that it is no 'flash-in-the-pan'.

I have CHALLENGED THE WORLD with my record of wins and with all the evidence that I possess – NO ONE has ever been able to accept the Challenge – I KNOW NO ONE EVER WILL. MY SYSTEM IS THE GREATEST TREBLE CHANCE WINNER IN THE HISTORY OF FOOTBALL POOLS – IT WILL LAST FOREVER – BOTH FOR ENGLISH AND AUSTRALIAN FOOTBALL POOLS, WITH EQUAL SUCCESS.

I now intend to give a limited number of people the opportunity of making use of my method – perfected over 25 years and proving itself on EVERY ONE OF THOSE TWENTY-FIVE YEARS. You will have noted details of my Personal achievements so far, as given to you above. A GRAND TOTAL OF 8,201, yes 8,201 POOLS DIVIDENDS, including 765 FIRST DIVIDENDS. My Pools Winnings Dividend slips now number so many, that they fill a very large suitcase and will stand as my evidence of all claims in ANY COURT OF LAW IN THE WHOLE WORLD.

Taking just the past 25 years into consideration, I have won ON AVERAGE over 328, (THREE HUNDRED AND TWENTY-EIGHT) Pools Dividends EVERY YEAR – or – AN AVERAGE of over SIX DIVIDENDS EVERY WEEK for TWENTY-FIVE YEARS.

You have my absolute Guarantee of the complete authenticity of every claim, cheque, document, letter, etc, contained herein.

I do have losing weeks, but ON AVERAGE my

winnings show over SIX DIVIDENDS EVERY WEEK for the past 25 years.

I know that you are now utterly flabbergasted, it always happens to everyone with whom I come into contact. Please just sit back and imagine for a moment my FIRST DIVIDEND wins alone – they now number 765, (seven hundred and sixty-five) and will probably be even more by the time this advertisement appears in print.

I AM NUMBER ONE IN THE WORLD AND NO ONE DISPUTES IT.

For as long as I continue to enter the Football Pools my wins will continue, as I've said, with equal success during both Australian and English Football.

I intend to release a STRICTLY LIMITED NUMBER of copies of my method – DO NOT DELAY AND FIND YOU ARE TOO LATE, in which case I would have to refund your money.

I am so confident of YOUR success that if you do NOT win at least THREE FIRST TREBLE CHANCE DIVIDENDS, in the first 20 weeks of entering, I will completely cancel the balance of the purchase price and you do not have to pay me another penny, at any time, no matter how vast your winnings.

I only wish that space would allow me to give you photographs of my winnings slips, cancelled cheques, etc, but it is of course impossible – they now number, 8,201 dividends. I have however given JUST A FEW EXTRACTS from ORIGINAL LETTERS I hold from my small clientele.

I am the Inventor and Sole Proprietor of my method, Registered as EUREKA – (I have found it). I am known as the Professor, in Pools Circles – I am of the highest Rank in Forecasting – this is beyond dispute. I am marketing a limited number of copies under my registered Company – FOOTBALL ENTERPRISES.

My initial charge for a copy was £75, but for this

SPECIAL REDUCED PRICE OFFER I will send you a copy for £20 (twenty pounds) ONLY, plus your Promise to pay me the balance of £55 – ONLY IF YOU WIN AT LEAST THREE FIRST TREBLE CHANCE DIVIDENDS IN YOUR FIRST 20 WEEKS OF ENTERING – otherwise you owe me NOTHING FURTHER. This is surely proof absolute of my supreme and utter confidence in my own abilities and in the capabilities of my discovery. My method is WORLD COPYRIGHT, any infringement and immediate proceedings will be taken, without prior warning. It is truly ingenious and has stood the test of time.

It is simplicity itself to calculate weekly. Your entry need not involve you in any large weekly stakes, you can enter for as little as just 25p, if you wish.

I charge NO COMMISSION on any of your wins – no matter how BIG they may be.

I realised a long time ago that it was no good sitting down and dreaming about winning the pools, so I burnt the candle at both ends, working late into the night, occasionally RIGHT THROUGH THE NIGHT, I KNEW there was a way, eventually it all paid off and has been doing so ever since.

I am unable to vary my offer to anyone, so please do not request it, as I shall very easily dispose of the limited number of copies I am making available.

IMMEDIATELY I perfected my method I commenced winning right away, (first win just a little £163 the first week I used it). I HAVE NEVER LOOKED BACK SINCE, amongst all these dividends was one for over EIGHT THOUSAND POUNDS for just one eighth of a penny stake. I will release a copy of my method to you, on receipt of the completed order form and your Signature thereon, confirming you will treat it in the STRICTEST CONFIDENCE between us and retain it for your OWN USE ONLY.

Don't take MY word for it, read what people write about me and my method:

I won on Zettars last weekend. It was not a big sum, but all the same it was a very nice surprise for me. J.C., Lancs.

I appreciate the straightforward method you adopt, which is such a contrast to the rubbish of misrepresentation which is so common in the Betting World, by unscrupulous and self opinionated charlatans. C.H., Devon.

Winnings cheque received today, sincere thanks. D.N., Devon.

I congratulate you on your achievement. R.R., Wales.

I should like to thank you for a most exciting season and look forward to hearing from you again. J.C., Nants.

I would like to acknowledge cheque and say how much I appreciate your integrity. J.M., Scotland. Many thanks for your system. It is all you say and more. J.C., Lancs.

Your wonderful system won me £3,527. I intend to visit London soon and will be able to come and see you Personally. (Overseas Client). P.M., Kampala.

I am very interested indeed and enclose £20 herewith. I agree to pay you the balance of £55, ONLY if I win at least THREE FIRST TREBLE CHANCE DIVIDENDS in my first 20 weeks of entering – otherwise I owe you NOTHING FURTHER at any time – no matter how much money I win. My signature below is my Undertaking to retain complete and absolute confidence about the method.

Many thanks for trying so hard to please us all, your brother should be thanked also. One of our daughters, whose husband you helped enormously, has just phoned, the four of them have just spent a wonderful holiday in Spain. K.R., Isle of Man.

I sent in my FIRST entry last week and won 2nd and 3rd dividends, as you will see from the enclosed certificate. One more and I would have collected over £400 for FIRST dividend. Once

I've won a fair amount I shall be staking from winnings and 2p per line, a FIRST dividend last week at this would have been over £3,000. C.A., Yorks.

SOFTWARE

Invading your space NOW!

MEGAPEDE

No matter how fast I fired, the Megapede kept on coming! I was gaining ground, though, when suddenly the Spider appeared on collision course zero! Turn-dodge-I out-maneuvred, I blasted him. But just then Scorpi appeared dropping her indestructible fleas... Nine levels of play plus high score 100% machine code. Full colour and sensational sounds. Rated by T.V. Choice as "a superb rendering of the popular arcade game". Realisation: Andrew Beale.

MONSTERS IN HELL

It was like a nightmare... trapped in a Hellish scene... chased through a maze of platforms and ladders by Vampire Monsters. But I had my Magic Hammer, and The Power was on my side. The Monsters were falling at my feet! When suddenly the Mad Monk sent forth his ghouls... Amazingly amazing addictive game, in super-fast machine code, with full colour graphics and superb sound. Realisation: Martin Lewis.
